Responses: 3 Total

It was a new course, so none of us had a totally solid idea of how it would go, and Jay was very flexible in adjusting the course when we discovered how difficult the assignments were to complete, etc.

I learned a TON in this class. and Jay is one of the best CS teachers out there.

I have been very impressed with Jay's concern for each of the students individually. Jay would take time out of the class to discuss our interests. It was great to focus on our desires to learn in many areas. Even outside of class, he was very focused on our individual interests and often talked with us about other opportunities or interesting research.

I would suggest having a more regular evaluation of where students are and where the class is at with assignments. Many of us assumed that everyone else was staying caught up, and towards the end of the semester we realized that all of us were very far behind. This was a lack of communication on our part as well, but it could help to facilitate that in the future.

We covered some really interesting topics while learning how to use Coq and prove theorems with constructive logic. I think my learning may have been additionally enhanced by perhaps having a few readings or writing assignments that provided a good opportunity to formally read about and reflect on some of these topics (e.g. Hoare logic, constructive vs. classical logic, etc...).

Overall great course! Thoroughly enjoyed.
